Project: Decrease in Open Mold Investigations for NYCHA Tenants

Chart: Depicts the decrease in open work inspections in relation to mold within NYCHA from March 24th, 2022 - January 31st, 2023. The data found for this chart was sourced from NYC.gov's [2023 Report on NYCHA's Mold and Leak Response Efforts: Progress, Challenges and Next Steps](#). The data can be located on pages 10-11.

Expert Source: Michael Stanley - former leader of Manhattan Together and South Bronx Churches who helped advocate for the Ombudsperson Call Center - center dedicated to aiding residents who are facing unresolved mold and moisture within their apartments. Also helped launch the Baez vs NYCHA lawsuit which helped to drive NYCHA's response to open work orders – mentioned in NYC.gov's report on pages 5-6.

HTML & Style.CSS

Process:

Familiar with how to set up a webpage, I managed to apply my headers, photo and paragraphs.

I pulled data from NYC.gov, copied them over into excel and made a chart:

Type	Open Cases in March 24, 2022	Open Cases In January 31, 2023	Decreased
Mold Inspections	2052	522	73%
Mold QA inspections	2138	723	66%
Mold Re-inspections	267	104	61%
Mold by Caretaker X	2174	228	90%
Mold Cleaning by Painter	6329	3283	48%

Achievements

- Familiar with how to set up a webpage, I managed to apply my headers, photo and paragraphs to create an HTML
- Links attached to the chart lead you to the data source
- Headings are appropriately formatted
- Color scheme

Challenges

- Caption and credit under photo are off center
- Had a hard time adjusting the margins on my page. Tried to shift the paragraphs and caption to the right, but could not get this to work.
- Had a hard time with DIV class=containers. Tried to make multiple containers to be able to shift certain items separately to mitigate the issues with the margins - this resulted in me shifting everything on the page off center.
